

SAVEETHA SCHOOL OF ENGINEERING
CSA15- CLOUD COMPUTING AND BIG DATA ANALYTICS
LIST OF EXPERIMENTS 3

3. Create a simple cloud software application for Property Buying & Rental process (In Chennai city) using any Cloud Service Provider to demonstrate SaaS.

Aim

To develop a cloud-based **Property Buying & Rental Management System** for Chennai city using **Zoho Creator** and deploy it as a **Software as a Service (SaaS)** application, enabling users to search, buy, rent, and manage property details online.

Procedure

1. Log in to **Zoho Creator** using a valid Zoho account.
2. Create a new application named **Property Buying & Rental System**.
3. Design forms such as:
 - Property Details
 - Owner Details
 - Buyer/Tenant Registration
 - Property Booking
4. Add required fields including Property ID, Property Type, Location (Chennai), Address, Price, Rent Amount, Owner Name, Buyer/Tenant Name, Contact Number, Email, and Booking Status.
5. Create reports to display available properties, booked properties, and customer details.
6. Configure workflows to validate entries and send booking or enquiry confirmation emails.
7. Assign user roles and permissions for administrators, property owners, and customers.
8. Publish and deploy the application on the Zoho Creator cloud platform.
9. Test the application by adding properties, searching listings, booking a property, and viewing reports through a web browser.

Result

A cloud-based **Property Buying & Rental Management System** for Chennai city was successfully developed and deployed using **Zoho Creator**. The application enabled users to manage property listings, enquiries, and bookings online, demonstrating the **Software as a Service (SaaS)** model by providing secure, web-based access without requiring local software installation.
